>Release:        FreeBSD 4.8-STABLE i386
>Organization:
>Environment:
System: FreeBSD daemonground 4.8-STABLE FreeBSD 4.8-STABLE #1: Tue Jun 3 14:31:21 CEST 2003 root@:/usr/obj/usr/src/sys/DAEMONG
```

```
>Description:
pgBash is a bash shell with the ability to directly connect to
a PostgreSQL Database and use it while still being at a shell
prompt with all its features.
```

```
>How-To-Repeat:
>Fix:
```

```
--- pgbash.shar begins here ---
# This is a shell archive.  Save it in a file, remove anything before
# this line, and then unpack it by entering "sh file".  Note, it may
# create directories; files and directories will be owned by you and
# have default permissions.
#
# This archive contains:
#
#   pgbash
#   pgbash/Makefile
#   pgbash/pkg-plist
#   pgbash/pkg-descr
#   pgbash/distinfo
#
echo c - pgbash
mkdir -p pgbash > /dev/null 2>&1
echo x - pgbash/Makefile
